NOVA SCOTIA PLANTS

Marian C. Munro, Ruth E. Newell, Nicholas M. Hill

Nova Scotia is home to around 1600 species of ferns, conifers and flowering plants. This book provides keys to aid in identification, distribution maps and species descriptions. Full-colour photographs have been crowd-sourced and used with permission. The geographical context of our flora, history of NS botanical exploration and this e-publication process are all discussed by the authors. The book also includes an index to scientific, English, French and Mi'kmaq names in addition to notes on those plants harmful to our health. The three authors share a history with Acadia University and were all students of the late SP VanderKloet. We are grateful for the support of the EC Smith Herbarium and the K.C. Irving Environmental Science Centre in addition to the Fernhill Institute.

We dedicate this work to those who came before us and those who follow us in the study of Nova Scotia Plants.

We are grateful for the support of
